

ROTT v 1.0.6s

Please - read full release notes. Test and let us know what you think.

Cpu 1.8 GHz

Gpu 600 MHz

The first stable release since 1.0.3s!!!

Atari to psx - working

N64 - working

Reicast - working

Psp - working

Dreamcast - working

Saturn - needs work but is included.

Notes:

Lvl 10 warning cannot find pcm is always there. You can disregard this warning. It's a lie.

This image does not like HDD storage . It is a bug we will have fixed in the next release. When you have a HDD Installed you will lose sound. 33% of testers did not have is issue, it might be "HDD Brand" related.

If you have sound issues:

Step 1) change the defaults on these to lines to 1's

```
sudo nano /usr/share/alsa/alsa.conf
```

```
defaults.ctl.card 1
```

```
defaults.pcm.card 1
```

Step 2) make adjust to your asound.conf to have only the following. Clear it and paste the following.

```
sudo nano /etc/asound.conf
```

```
pcm.!default {
```

```
type plug
```

```
slave {
```

```
pcm "hw:1,0"
```

```
}
```

```
}
```

```
ctl.!default {
```

```
type hw
```

```
card 0  
}
```

Save and exit

Step 3) copy and paste the following after the reboot you will have sound via the hdmi.

```
sudo mv /dev/snd/timer /dev/snd/timer.old && sudo reboot
```

Sound via 3.5mm Jack

Replace Step 2) with the following then proceed to step 3. After step 3 and the reboot you will have sound via the 3.5mm jack.

```
pcm.!default {  
type plug  
slave {  
pcm "hw:0,2"  
}  
}  
ctl.!default {  
type hw  
card 0  
}
```
